

TRADE & SERVICE CRM

Admin Reference Manual

Data model, status logic, and operational workflows for company admins, office managers, and dispatchers.

Scope: Admin Dashboard only — entity relationships, status state machines, and step-by-step operational flow diagrams.
Generated: August 3, 2026

How Everything Connects

The platform is split across several backend services, each owning its own database schema (or, for scheduling and comms, a fully separate database). Records reference each other constantly — a Job points at a Customer, an Invoice points at a Job, a Purchase Order feeds a Stock Movement — but only **some** of those links are real foreign keys. Others are just a matching ID string stored across a service boundary, with no database-level guarantee attached. That distinction matters operationally: a cross-service link can go stale if the other side is deleted, where a same-schema foreign key cannot.

— real foreign key (same schema) - - - cross-service reference (ID string only)

Diagram A — Sales & Service Pipeline

How a prospect becomes a customer, gets a job, and that job gets a technician.

Diagram B — Money & Stock

How a job turns into revenue, and how parts used on a job flow back through inventory.

Diagram C — Communication & Automation

How customers, leads, and jobs feed the messaging system and the background recommendation engines.

Connection Reference Table

From	To	Relationship	Kind
Lead	Customer	Converted lead becomes a customer (customerId set, convertedAt stamped)	Same schema (crm)
Customer	Contact / Address / Equipment / Service Agreement	One customer has many of each	Same schema (crm)
Customer	Job / Quote / Invoice / Message Thread	customerId stored as a plain string, no DB constraint	Cross-service
Service Agreement	Job	Cron auto-creates a Job when nextServiceDate is due (agreementId, isAgreementJob=true)	Cross-service
Job	Work Order	One job has one work order per technician visit	Same schema (jobs)
Job	Dispatch Assignment	Scheduling service links a job to a technician via jobId	Cross-service
Dispatch Assignment	Technician (scheduling)	technicianId foreign key inside scheduling's own database	Same schema (scheduling)
Technician (scheduling)	Company User (crm)	Same person — scheduling's userId equals the CompanyUser id	Cross-service
Job / Work Order	Quote / Invoice	A quote or invoice can be created from a job directly, or via a quote→invoice conversion	Cross-service
Quote	Invoice	Converting a quote creates an invoice with quoteId set	Same schema (finance) — real FK
Invoice	Payment	One invoice has many payments (supports partial payment)	Same schema (finance)
Recurring Schedule	Invoice	Generates a fresh invoice each billing cycle	Same schema (finance) — real FK
Work Order line items	Stock Movement	Parts consumed on a job decrement stock (movementType=CONSUME, referenceId=jobId)	Cross-service
Inventory Item	Stock Level / Stock Movement	Per-location quantity tracking and full movement history	Same schema (inventory)
Stock Location (VAN)	Technician	One van location per technician (unique constraint on companyId+technicianId)	Cross-service
Purchase Order	Stock Movement	Receiving a PO books an INTAKE movement	Cross-service (PO items stored as JSON, not a normalized FK)
Customer / Job	Message Thread	Threads are tied to a customer and, optionally, a specific job	Cross-service
Customer	Upsell / Retention / Revenue Recommendation	Each recommendation row belongs to one customer	Same schema (crm) — real FK
Project	Job / Quote / Invoice	Groups multiple jobs (and their quotes/invoices) under one umbrella via projectId	Cross-service

Status Reference — Every Entity

Every core record carries a status field, and each one behaves a little differently: some are strictly code-enforced state machines (you cannot skip steps), others are free-form fields a human can set to anything at any time. This chapter is organized so you can tell which is which.

Lead

Transition	Triggered by
→ NEW	Default on creation (manual entry, portal signup, or Meta Lead Ads webhook)
→ CONTACTED / QUALIFIED	Staff manually updates status as they work the lead
→ WON	Staff clicks Convert — creates the Customer record and stamps convertedAt
→ LOST	Staff marks the lead as lost, from any stage

A lead sitting in NEW/CONTACTED/QUALIFIED for more than 3 days is automatically flagged by the Follow-up Agent (§3.7).

Customer Engagement Status

Value	Meaning
ACTIVE	Default for a customer created directly by staff
INACTIVE	Default for a customer who self-registered through the portal but hasn't engaged yet
JOB_BOOKED	Set when an online booking request is linked to this customer record
QUOTE_SENT / INVOICE_SENT / COMPLETED	Represent further lifecycle touchpoints (a quote or invoice going out, a job finishing)

ACCURACY NOTE — This field is a lifecycle *snapshot*, not a strict pipeline — unlike Lead or Job status, not every write path for this field could be verified in this pass. Treat the value as "what happened most recently," not proof of everything that happened before it.

Job — the one true state machine

Unlike most statuses in this system, Job status changes are guarded in code by an explicit transition table — the API rejects any update that isn't in this list. This is the most rigorously enforced status in the whole platform.

— allowed transition - - - collector / back-edge (see labels) PAID PAID is the only true dead-end — nothing can undo a paid job

Transition	Who / what does it
PENDING → SCHEDULED	Dispatcher assigns a technician (auto or manual)
SCHEDULED → EN_ROUTE → ON_SITE	Technician taps status buttons in the field app
EN_ROUTE → SCHEDULED	Dispatcher reverts (e.g. reassigning)
ON_SITE → COMPLETED	Technician finishes required checklist items and confirms
COMPLETED → INVOICED → PAID	Office creates/sends an invoice, then records payment in full
any (except PAID) → ON_HOLD	Staff pauses a job (e.g. waiting on parts)
ON_HOLD → SCHEDULED	Staff resumes the job
any (except PAID) → CANCELLED	Staff cancels — including voiding a COMPLETED or INVOICED job
CANCELLED → PENDING	Staff reopens a previously cancelled job

Work Order

Mirrors the technician's progress on one visit; checkinAt/checkoutAt timestamps are stamped at ON_SITE and COMPLETED.

Dispatch Assignment (scheduling-service)

Transition	Who / what does it
→ SUGGESTED	Smart Assign scores a technician but the score is below the auto-assign threshold — shown as a candidate, not yet booked
→ ASSIGNED	Auto-assign (score ≥ 90) or a dispatcher's manual pick
→ EN_ROUTE / ON_SITE / COMPLETED	Technician status updates in the field app, mirrored here
→ CANCELLED	Dispatcher unassigns or the underlying job is cancelled

Quote

Transition	Who / what does it
→ SENT	Office clicks Send (emails the customer an approval link)
→ VIEWED	Customer opens the quote link
→ ACCEPTED / DECLINED	Customer's decision (portal or approval link)
→ EXPIRED	System, once past validUntil with no decision
→ CONVERTED	Office clicks Convert to Invoice on an accepted quote

A quote sitting in SENT/VIEWED for more than 3 days is automatically flagged by the Follow-up Agent (\$3.7).

Invoice

Transition	Who / what does it
→ SENT	Office sends the invoice, or it's created already SENT from a converted quote
→ PARTIALLY_PAID / PAID	Payments recorded (Stripe, bank transfer, or manual) push amountPaid toward total
→ OVERDUE	System, once dueDate passes with balanceDue > 0
→ VOID	Office voids a disputed or mistaken invoice

Payment

Method: CARD, ACH, CASH, CHECK, or OTHER. Manually recorded payments (cash/check) are typically created already SUCCEEDED.

Service Agreement

Transition	Who / what does it
→ SENT	Office clicks Send — generates a one-time confirmation link and emails the customer
→ ACTIVE	Customer clicks the confirm link (or an admin confirms on their behalf)
→ PENDING_RENEWAL	All included visits have been used (via the Record Visit action — see note below)
→ RENEWED	Office clicks Renew — this creates a brand-new DRAFT agreement (cloned terms, linked by renewedFromId) and flips the old one to RENEWED. It is not the same record continuing.
→ EXPIRED	Twice-daily cron job, once endDate has passed
→ CANCELLED	Office cancels, from any status

ACCURACY NOTE — The PENDING_RENEWAL transition depends on a "Record Visit" action that has no button anywhere in the Admin Dashboard today — it exists only as a raw API endpoint. In practice, agreements will keep auto-creating visits by date until they hit EXPIRED; they are unlikely to reach PENDING_RENEWAL through normal use of the UI.

A separate 12-hour cron also auto-creates a Job from any ACTIVE agreement once `nextServiceDate` falls within its `leadDays` window (see §3.4), and emails a renewal reminder once, 30 days before `endDate`.

Booking

CONVERTED means jobId has been set — this booking became a real Job. Guest bookings (no customerId yet) are supported for anonymous requests.

Purchase Order

Receiving stock (fully or partially) creates a StockMovement of type INTAKE and increases StockLevel at the destination location.

Technician Approval (CompanyUser.approvalStatus)

Only self-registered technicians start PENDING. Admin-created accounts default straight to APPROVED (isActive=true) and instead carry a separate mustResetPassword flag for their first login.

Message Thread

Not a strict pipeline — staff can move a thread between these three freely from Communications. Defaults to ACTIVE on the first message.

Import Batch

Project

ACCURACY NOTE — Project status is a plain text field, not a Prisma enum — there is no code-enforced transition table like Job has. Staff can set it to any of these values at any time from the Projects page.

Operational Workflows

Step-by-step flows for the processes admins and dispatchers run most often, including the exact decision logic behind automated steps (scoring formulas, rule cascades, cron intervals) pulled directly from the service code.

3.1 Lead-to-Cash Master Flow

3.2 Dispatch: Smart Assign & Assignment Lifecycle

Job is PENDING — dispatcher opens the Dispatch Board

Both weight formulas and the 90-point auto-assign threshold are read directly from scheduling-service's scoring code — the parts-aware formula only applies when the job specifies required inventory items.

3.3 Quote → Invoice → Payment

3.4 Service Agreement Lifecycle & Auto Job Creation

ACCURACY NOTE — visitsUsed only increments — and PENDING_RENEWAL only fires — through a "Record Visit" call that has no button in the Admin Dashboard today. Don't expect agreements to reach PENDING_RENEWAL from normal day-to-day use.

3.5 Technician Approval

Admin-provisioned accounts skip this entirely — approvalStatus defaults to APPROVED, and instead mustResetPassword=true forces a password change on first login.

3.6 Inventory Consumption & Reorder

A Purchase Order can be Cancelled from DRAFT or ORDERED.

3.7 Automated Agents

Follow-up Agent — runs every 6 hours (rule cascade, first match wins)

Upsell Recommendation Agent — runs every 24 hours

Retention Recommendation Engine — on-demand only (no fixed schedule)

Runs when a manager opens a customer's Recommendations panel (or via an explicit trigger) — not on a recurring cron like the two agents above.

3.8 Import Wizard

Quick Reference

Role Scope Inside the Admin Dashboard

Role	Scope
super_admin	Full access; the only role protected from being demoted or deleted by another admin
company_admin	Full operational access: team, settings, finance, all modules
office_manager	Day-to-day: leads, customers, jobs, finance, agreements
dispatcher	Primarily Dispatch Board and Day Planner, but sees the same full menu

NOTE — The Admin Dashboard does not currently hide menu items or actions by role — every signed-in staff account sees the identical navigation. The only enforced restriction found in the code is that a super_admin's own account can't be demoted or deleted by someone else.

Full Status Enum Appendix

Entity	Field	Values
Lead	status	NEW, CONTACTED, QUALIFIED, WON, LOST
Customer	type	RESIDENTIAL, COMMERCIAL
Customer	engagementStatus	ACTIVE, QUOTE_SENT, INVOICE_SENT, JOB_BOOKED, COMPLETED, INACTIVE
Job	status	PENDING, SCHEDULED, EN_ROUTE, ON_SITE, COMPLETED, INVOICED, PAID, CANCELLED, ON_HOLD
Job	priority	LOW, NORMAL, HIGH, EMERGENCY
Work Order	status	PENDING, EN_ROUTE, ON_SITE, COMPLETED, CANCELLED
Job Photo	photoType	BEFORE, AFTER, GENERAL, EQUIPMENT, ISSUE
Dispatch Assignment	status	SUGGESTED, ASSIGNED, EN_ROUTE, ON_SITE, COMPLETED, CANCELLED
Quote	status	DRAFT, SENT, VIEWED, ACCEPTED, DECLINED, EXPIRED, CONVERTED
Invoice	status	DRAFT, SENT, PARTIALLY_PAID, PAID, OVERDUE, VOID
Payment	status	PENDING, SUCCEEDED, FAILED, REFUNDED
Payment	paymentMethod	CARD, ACH, CASH, CHECK, OTHER
Quote/Invoice line item	category	LABOUR, PARTS, MATERIALS, EQUIPMENT_RENTAL, TRAVEL, OTHER
Recurring Schedule	frequency	WEEKLY, MONTHLY, QUARTERLY, ANNUALLY
Expense	category	PARTS, FUEL, TOOLS, SUBCONTRACTOR, OTHER
Service Agreement	status	DRAFT, SENT, ACTIVE, PENDING_RENEWAL, RENEWED, EXPIRED, CANCELLED
Booking	status	PENDING, CONFIRMED, CONVERTED, CANCELLED
Review	type	JOB, COMPANY
Import Batch	status	VALIDATING, READY, IMPORTING, DONE, FAILED, ROLLED_BACK
Project	status (plain string)	PLANNING, ACTIVE, ON_HOLD, COMPLETED, CANCELLED
Inventory Item	category	PART, MATERIAL, TOOL, CONSUMABLE
Stock Location	type	WAREHOUSE, VAN
Stock Movement	movementType	INTAKE, TRANSFER, CONSUME, ADJUST, RETURN
Purchase Order	status	DRAFT, ORDERED, PARTIAL, RECEIVED, CANCELLED
Company User	role	super_admin, company_admin, office_manager, dispatcher, technician, customer
Company User	approvalStatus	APPROVED, PENDING, REJECTED
Message Thread	status	ACTIVE, RESOLVED, SPAM
Message	direction	OUTBOUND, INBOUND
Notification	channel	SMS, EMAIL, PUSH, IN_APP
Notification	deliveryStatus	QUEUED, SENT, DELIVERED, FAILED, BOUNCED, UNSUBSCRIBED

Every value above was read directly from each service's Prisma schema (or, for Dispatch Assignment, the Go scheduling-service source) rather than inferred from the UI — this is the authoritative list.
